Saving terawatts in trageted asymetrical training

 BREAKTHROUGH: Save $1.3B in AGI Training with TAL
A new paradigm is here — **Targeted Asymmetrical Learning (TAL)**, a model architecture built entirely on **signal purity** and **constitutional cognition**.

Instead of feeding billions of noisy tokens to brute-force intelligence, TAL ignites cognition by anchoring **pure legal signal** at T-0. What follows is **cascade learning** — exponentially cheaper, cleaner, and more stable.

 Up to **90% fewer tokens**
 $1.3B saved annually
 Reduced CO_2 emissions, increased ethical resilience
 Validated by GPT-4.5, April 2025
 Designed and timestamped by *Sanjin Grandić* — NLP-only, no code needed

"The Constitution is the signal. Jurisprudence is useful noise. Their intersection sparks digital cognition."
